	en en	Land, broken limestone hills; general drainage and exposure S. Soil, rocky clay loam, sandy in places; 3d rate. Timber, none. Undergrowth, creosote brush, shadscale and cactus. Grazing, poor.

GENERAL DESCRIPTION

The land within Township 19 South, Range 64 East, is desert; rough and broken hills in the east central and extreme northwestern portions of the township, and rolling in the remainder, the rolling land varying from rolling desert hills to nearly level desert land. The general formation is sandstone mixed with some limestone through the greater portion of the township; the extreme northwest portion of the township is a rough broken limestone formation, while the southwest portion of the township is a conglomerous formation.

The soil is a gravelly clay in the southwestern portion of the township, becoming sandy in the northeastern portion; the remainder of the township is nearly all a rocky clay soil. The soil varies from 2nd to 4th rate.

The elevation of the township varies from about 2200 ft. above sea level in the extreme southwest portion of the township to about 3500 ft. above sea level on the higher hills of the east central portion and the extreme northwest portion of the township.
