

Survey of a Portion of the Subdivision of T. 13 N., R. 58 E.

Chains

Raise a mound of stone, $2\frac{1}{2}$ ft. base, 1 ft. high, around the iron post.

from which

A forked pinon, 12 ins. diam., bears S. 32° E., 5 lks. dist., mkd. $\frac{1}{4}$ S5 BT.

A juniper, 18 ins. diam., bears S. 74° W., 70 lks. dist., mkd. $\frac{1}{4}$ S5 BT.

The reestablished S. $\frac{1}{4}$ sec. cor. of sec. 32, T. 14 N., R. 58 E., bears N. $89^{\circ} 04'$ E., 2.04 chs. dist., hereinbefore described.

At the point for the N. $\frac{1}{4}$ sec. cor. of sec. 6, at 40.00 chs. in departure from the closing cor. of secs. 5 and 6.

Set an iron post, 3 ft. long, 1 in. diam., 20 ins. in the ground to bedrock, with brass cap mkd.

$\frac{1}{4}$ S 6
1941

Raise a mound of stone, $2\frac{1}{2}$ ft. base, 16 ins. high, around the iron post.

from which

A pinon, 5 ins. diam., bears S. $4\frac{1}{2}^{\circ}$ E., 47 lks. dist., mkd. $\frac{1}{4}$ S6 BT.

A pinon, 6 ins. diam., bears S. 51° W., 86 lks. dist., mkd. $\frac{1}{4}$ S6 BT.

The reestablished S. $\frac{1}{4}$ sec. cor. of sec. 31, T. 14 N., R. 58 E., bears N. $89^{\circ} 04'$ E., 2.07 chs. dist., hereinbefore described.

General Description

The character of the land in this township is rough rugged mountainous. The west half of the township lies along the west slope of White Pine Range. The summit of this range of mountains traverses in a nearly northerly and southerly direction; approximately a quarter mile to the east of the third meridional section line and the elevation is approximately 9000 feet above sea level. Along various places on the west boundary which are the lowest in elevation are about 7000 feet above sea level. For nearly the whole length of the fourth meridional range of sections four separate tiers of cliffs, ledges and crags stand out, paralleling the crest of the mountain and from which numerous broken ridges and spurs slope in a westerly direction.

The drainage system is good. The main drainage to the west of the central mountain range is by Blackrock Canyon with its tributaries, and two other gorges lying to the south, all having a southwesterly drainage.

The soil is generally of a light fine sandy loam, medium texture, mixed with decomposed limestone, porphyry, quartzite and trachyte, with considerable talus sliderock and gravel strewn over the surface.
