 1953

Bury the old post alongside and to the north, set a juniper post, 5 ins. square, 4 ft. long alongside and to the east, and place four large rocks around the iron post.

Land, nearly level valley.

Soil, alkaline clay loam.

No timber; undergrowth, mostly sagebrush and salt weed.

General Description

This township lies in the heart of Jake's Valley and is situated 15 to 20 miles due west of Ely, Nevada, along the west foot of the desert mountains known as Egan Range.

Generally the soil over the township is a light colored alkaline clay, though there are some rolling and broken areas along the south and east boundaries where the soil is generally sandy, gravelly and rocky.

Most of the township is devoid of timber and over most of the area undergrowth consists mainly of low sage, shadscale, salt weeds and grasses, with some blackbrush and greasewood.

The area is chiefly valuable for stock grazing and there are several stock water developments in the area.
