

DEPENDENT RESURVEY, T. 26 N., R. 61 E.

CHAINS

The following field notes are those of the dependent resurvey of the Fifth Standard Parallel North, through Range 61 East; the East and North boundaries and the subdivisional lines of T. 26 N., R. 61 E.

The boundaries lines were surveyed by Preble and Thorburn, in 1881. Subdivisional lines were surveyed by Monroe and McClellan in 1882.

The resurvey was requested by the State Director to provide identification of the boundaries of public land to facilitate administration under the appropriate land laws.

Before restoring the corners, the lines of the original survey were retraced and diligent search made for any evidence of the original corners and other calls of the original field notes record.

The rules of proportionate measurements were applied in order to ascertain the position of lost corners, after completing the necessary retracements to connect with the identified corner locations. In order to simplify the record, the true line notes only are supplied herewith, which refer to the completed resurvey.

The survey was executed in accordance with the specifications as set forth in the Manual of Surveying Instructions, 1947 and the Special Instructions dated February 24, 1965.

The direction of the lines of this survey were determined by altitude observations on the sun. The lines were carried forward by sustained angulation being supplemented by other altitude observations on the sun taken throughout the progress of the survey. The vertical angles of measurements made on the slope were ascertained by a clinometer in good adjustment; the horizontal equivalents only are entered in the field notes.

The geographic position for the southeast corner of the township is at latitude $40^{\circ} 04' 43.5''$ N., and longitude $115^{\circ} 02' 07.4''$ W., as adjusted along section lines from station ELA 014 of the Nevada Planning Dept. of the Nevada Highway Dept. located in sec. 13, T. 26 N., R. 61 E.

The magnetic declination was read at a number of stations throughout the township and the average of these readings was found to be 17° .
