39.97	The center east 1/16 sec. cor. of sec. 18.
	GENERAL DESCRIPTION

The area surveyed and resurveyed within T. 14 N., R. 41 E., varies from gentle rolling hills in the east and west portions to nearly level in the central portion. The elevation ranges from about 6,320 to 6,880 ft. above sea level. The soil varies from rocky sandy loam on the rolling hills to black loam on the bottom land. The vegetation consists of shadscale, sagebrush, pasture grass, and other native grasses. There are scattered stands of willows along the Reese River which crosses the township in a northerly course.

There are several small ranches situated in sections 5, 7, 8, 17, and 18. No mineral formations of consequence were noted during the survey.

The average of a number of readings along the lines resurveyed gives a mean magnetic declination of $17\frac{1}{2}^{\circ}$ E., with a range of 1° in local attraction.
