	GENERAL DESCRIPTION
	The area included in this survey and resurvey lies approximately 20 miles NNW. of Ely, Nevada. The soil consists of alkali flats in the northerly and easterly portion of section 8 and sandy loam throughout the remainder of the area. There is very little elevation change, with an average elevation of about 6,100 ft. above sea level. Drainage is provided by several irrigation canals and numerous small ravines draining generally easterly.
	The principal use of the land is for cattle grazing.
	The mean magnetic declination of the area is 16° E.
