GENERAL DESCRIPTION

The area resurveyed within Township 41 North, Range 54 East, varies from gently rolling land in the eastern portion of the township to mountainous land in the western portion. The elevation varies from 6,500 to 7,500 ft. above sea level. The soil consists of sandy clay and rocky at the higher elevations, to sandy loam at the lower elevations. The vegetation consists of sagebrush, meadow grass and other sparse native grasses. There are scattered stands of aspen at the higher elevations.

Principal users of the area are cattlemen. No mineral formations of consequence were noted during the survey. Access into the township is provided with numerous unimproved roads.
