

## TOWNSHIP 34 NORTH, RANGE 67 EAST, MDM, NEVADA

## CHAINS

The following field notes are those of the dependent resurvey of the south and east boundaries and the subdivisional lines of Township 34 North, Range 67 East, Mount Diablo Meridian, Nevada.

The west boundary was surveyed by U.S. Deputy Surveyors J.C. Smyles and C.S. Preble in 1881 under Contract No. 112. The cor. of secs. 19, 24, 25, and 30, on the east boundary was reestablished by James W. Hardison, Surveyor and Wilson McConkie, Public Land Surveyor, in 1939 under Group No. 170. The south, east, and north boundaries and subdivisional lines were surveyed by U.S. Deputy Surveyors J.C. Smyles and C.S. Preble in 1881 under Contract No. 119. The north 4 miles of the east boundary were resurveyed by U.S. Deputy Surveyor W. B. Coldwell in 1909 under Contract No. 261. The north and west boundaries were resurveyed concurrently under this same group.

Before restoring the corners, the lines of the original surveys were retraced and diligent search made for any evidence of the original corners and other calls of the original field note record.

The rules of proportionate measurement were applied in order to ascertain the position of lost corners, after completing the necessary retracements to connect with the identified corner locations. In order to simplify the record, the true line notes are supplied herewith which refer to the completed resurvey.

The survey was executed in accordance with the specifications as set forth in the Manual of Surveying Instructions, 1973, and the Special Instructions dated November 16, 1977.

The directions of the lines of this survey were determined by azimuth taken from U.S.C. & G.S. triangulation station "SANDS," located in section 4 of T. 35 N., R. 67 E., and carried forward by sustained angulation.

The geographic position of the southeast corner of the township is at latitude  $40^{\circ} 46' 29.2$  N. and longitude  $114^{\circ} 20' 07.6''$  W., as calculated along section lines from U.S.C. & G.S. triangulation station "SANDS."

The mean magnetic declination was found to be  $17^{\circ}$  East.
