No. 3 of M.S. No. 1835, South Merrimac lode, hereinbefore described.</p>
	<p>GENERAL DESCRIPTION</p> <p>The land within the confines of this survey in Township 37 North, Range 53 East, located approximately 25 miles north- northwest of Elko, Nevada, ranges from 5,500 to 8,400 ft. above sea level. The southern end of the Independence Mountains extend from the southern to the northern part of the township, with Lone Mountain, a distinct north-south ridge, rising in sections 11 and 14. There are several springs in the Independence Mountains, feeding many creeks and ravines which drain either westerly to Maggie Creek or easterly to Susie Creek. The soil is generally sandy clay loam with rocks. The vegetation consists of scattered sagebrush, serviceberry, rabbitbrush and native grass with willows along the springs and creeks.</p> <p>Access is gained from Elko via Nevada State Highway No. 225, then westerly along trail roads, or from Carlin via Maggie Creek. There are numerous trail roads throughout the township.</p> <p>Principal users of the area are ranchers and miners.</p>
